

# **AVAYA EQUINOX® ATTENDANT**

www.intlxsolutions.com 781-352-0377

#### With Avaya Equinox Attendant you can:

- Greet incoming callers personally
- Route calls based on presence status
- Support centralized routing across a distributed enterprise environment
- Leverage suggested call routing capabilities
- Respond rapidly and accurately to critical customer communications

# Creating the right image with your customers, every time.

An inbound call can often be the first opportunity for your business to create a positive impression. A quick response, an appropriate greeting, and efficient handling all create a sense of how the rest of your business operates and can lead to stronger customer relationships. Poor responsiveness can send customers away just as quickly.

# Streamlining **Communications and Driving Customer Service**

Avaya Equinox<sup>®</sup> Attendant leverages the power of unified communications capabilities to give your front desk personnel the best possible chance of creating the right first impression. It all starts with Equinox Attendant's intuitive interface. Operators have a clear view of all callers, including their call details and any contextual history. From there, Equinox Attendant provides an optimized call handling experience that allows operators to efficiently direct callers to the right resource. This action oriented workflow helps reduce the caller's time in queue and increase the chance of the call being correctly routed the first time. These advanced features include:

- Presence services information that allows the operator to "look ahead" and see the status of the intended recipient. If the recipient is busy or in a meeting, presence allows the operator to inform a caller that they will be directed to voice mail or ask if they wish to speak to someone else that is available.
- A favorites list that provides quick access to the most common destinations for your business's incoming calls.
- Suggested call routing. Based on previous call patterns, Avaya Equinox Attendant will automatically suggest the most likely destination for the individual caller, enabling rapid call handling, and reduced hold times.

Avaya Equinox® Attendant leverages the power of unified communications capabilities to give your front desk personnel the best possible chance of creating the right first impression.

- Cherry Picking specific calls from a call queue. This allows operators to handle the most important incoming calls immediately, rather than being confined to a "first come, first served" limitation.
- Contextual information. Equinox Attendant operators can add notes to a caller's contact card, indicating the caller's preferences, priorities or personal information that allow the operator to provide a more personal touch to the next interaction with that customer.

## **Operator Controls that Keep Your Business Communications Fast and Efficient**

Avaya Equinox Attendant places the operator in control, with features that allow them to readily assess and distribute calls to the correct extensions. User data can be imported from up to five data sources including enterprise directories and external databases. Operators can look across queues and see wait-times, and caller details, quickly search the directory for employees and see their status, including their calendar details, and set up individual speed dial lists to meet their specific needs.

The Call History tab provides a complete log of calls showing incoming, missed, recalls, and outgoing calls and includes a search capability that can be used to rectify misplaced or dropped calls.

Transfer, Hold and Retrieve, and Park and Unpark actions are intuitively integrated into the operators screen with support for both blind and consultative transfer helping make accurate call treatment easier and less error prone in high volume situations. Advanced call management capabilities such as Camp-on, Recall, Recall Camp-on, Overflow, Night Service, and Busy enable operators to give critical communications, including executive communications, the priority they require. Operators can also establish conference calls with up to six parties on behalf of users.

Avaya Equinox Attendant allows operators the flexibility to join or leave queues depending on their circumstances. It also includes a wrap time option for operators, allowing them to populate the caller card before moving on to their next interaction.

### An Enterprise Grade Solution for you Growing Business

For maximum efficiency, call coverage is often centralized across a widely distributed enterprise and Avaya Equinox Attendant has the capacity and capabilities to support these requirements. Equinox Attendant has database support for up to 50,000 entries, with up to 50 operators per system, allowing flexible coverage and maximizing operator resources at the busiest times. In-bound calls can be configured into as many as 50 queues or topics, with each operator logging into up to five topics at a time. Operators can easily search across multiple directories simultaneously including LDAP/AD and up to five customer databases. Global E.164 dial-plan support enables operators to staff queues anywhere in the world.

## Flexibility that fits Your Enterprise

Avaya Equinox Attendant deploys easily on Microsoft Windows 8.1 and Windows 10 PCs and supports industry standard USB and Bluetooth headsets. Operators can choose Computer mode for calling, using a wide range of codecs including G.722, G.726, G.729 and G.711 offering HD audio capabilities that adapt to changing network conditions. Alternatively, the operator can switch to use their Avaya SIP-based desk phone for audio.

## Protecting Sensitive Data

Protecting access to sensitive business and personal data is an important issue, particularly in companies where a number of different staff members or part-time employees perform front desk functions. Avaya Equinox Attendant enables you to create user profiles based on different levels of access authorization and to assign individual employee areas of responsibility.
