

Software Release Management

Controlled Change. Operational Confidence.

Software Release Management (SRM) helps organizations keep systems secure, stable, and up to date. intlx Solutions manages the review, validation, remediation, and deployment activities required to reduce risk while maintaining operational continuity.

KEY CAPABILITIES

- Manufacturer specification and compatibility validation
- Operating system and hardware dependency verification
- Customer-provided vulnerability (CVE) analysis
- Security patch governance and deployment oversight
- Change management documentation and approval tracking
- SOC2-aligned audit readiness and reporting

COMPLIANCE & GOVERNANCE

Manufacturer Specifications

Validate hardware, operating system, and application compatibility before deployment.

Security Compliance

Review customer-provided CVEs and manufacturer-disclosed vulnerabilities.

SOC2 Standards

Document, approve, and validate all changes to maintain audit readiness.

COVERAGE OPTIONS

Frequency of software updates, vulnerability remediation, and security patch management.

AD-HOC
as needed

ANNUAL
once yearly

SEMI-ANNUAL
twice yearly
